Dr. Tarpy, hope this finds you well. I am currently re-constructing a new and updated SaveTheHives mapping program, and wanted to see if you thought it is still an idea worth pursuing. With AI assistance, I've been able to reconstruct what originally took me months of hand coding, in a couple of hours. And I'm able to re-load all that historic data (if even still relevant). Open to a chat, or another contact if you've passed this on to someone else.

Hope to hear from you soon, Ronnie

Hi Ronnie,

So great to hear from you! I was actually just thinking of your mapping project the other day since I drove by the location where I plugged in a feral bee tree. Such timing!

Great that you're revamping this. I remember you were working with Debbie Delaney at UDel when she was working in this space, but I know her position has changed to be more teaching oriented so not sure she's still working on feral honey bees anymore. Not sure who else is active in that area, but let me see if I can look into the literature and find some names, I'm sure someone has to. I know there's a grad student in Jamie Ellis' lab in Florida (Kleckner) who's studying wild nests in sub-Saharan Africa, but not sure if she's doing something with feral bees state-side. I think Juliana Rangel at Texas A&M has published stuff recently, and I know Boris Baer at UC Riverside has an active program on his "survivor" stock (with a lot of AHB genetics) so he's certainly engaged in that.

Not sure if this helps or complicates, but great to see this back online and cool that AI was able to facilitate! Hope all else is well!!

Sincerely, David

Thanks so much David, here is a beta-version for now: <https://game-warden.github.io/SaveTheHives-pwa/>

If you hit any glitches, let me know. Once this is more complete, I'll send out how to save this to your phone's home screen for ease of use. I added in the ability to search through comments and filter by type.

Another idea I had was to contact the scouts, and see if they would be interested in making this a badge for bee-lining. That feature is still being worked on. They could also help re-validate the ~1100 legacy hives we have out there.

I look forward to hearing from you, and possibly scheduling a Zoom call with others for input/ideas.

Talk soon, Ronnie

Terrific, thanks so much Ronnie. It's always been my dream that your site would enable a culture that merges naturalists/birding with geocaching, so your idea of linking up with the scouts is brilliant! I'm an empty nester now so I have a lot more free time on my hands, I might try to do the same!
